To: Hiring Team

Company: Yuno

Role: Sales Development Representative

Dear Hiring Team,

I am writing to apply for the Sales Development Representative role at Yuno. As someone who builds automated B2B outbound systems, I was immediately drawn to Yuno's identity as an AI-native operating system preparing for the next generation of agentic payments. This aligns perfectly with my own practical experience deploying AI and agentic tooling to drive commercial pipeline.

Through my independent lead generation practice (CLG Project), I designed and executed end-to-end B2B outbound campaigns from scratch. By leveraging workflow automation (Make.com, Python) and Agentic AI (Claude, Antigravity CLI), I streamlined my data-scraping workflows to source and qualify over 500 B2B prospects. To keep my pipeline organized and actionable, I utilized Salesforce and Apollo.io for accurate CRM tracking. This highly structured, AI-assisted approach allowed me to consistently generate 5–10 qualified leads per week and convert my outreach into booked discovery meetings with US decision-makers.

While my degree is in Multimedia Engineering rather than Business or Marketing, this technical foundation ensures I can quickly grasp complex API products and confidently present Yuno's solutions to technical merchant stakeholders. I am fully fluent in English and Spanish, and I would welcome the opportunity to bring my relentless drive and AI-assisted prospecting skills to your high-performing team.

Sincerely,

Daniil Kotelevets
